

$$\approx \begin{array}{c} \text{green rectangle } \mathbf{c}_1 \\ \text{red rectangle } \mathbf{a}_1 \end{array} \text{blue rectangle } \mathbf{b}_1^T + \dots + \begin{array}{c} \text{green rectangle } \mathbf{c}_F \\ \text{red rectangle } \mathbf{a}_F \end{array} \text{blue rectangle } \mathbf{b}_F^T$$

The diagram illustrates a tensor decomposition. On the left, a 3D cube labeled y is shown. To its right, an approximation symbol $\approx$ is followed by a sum of terms. Each term consists of a red vertical rectangle labeled $\mathbf{a}_1$ (or $\mathbf{a}_F$) and a green tilted rectangle labeled $\mathbf{c}_1$ (or $\mathbf{c}_F$), which are connected to a blue horizontal rectangle labeled $\mathbf{b}_1^T$ (or $\mathbf{b}_F^T$). The terms are separated by plus signs and an ellipsis, indicating a summation over multiple components.
